3. NIGHTJAR OBSERVATIONS: At each stop, listen for 6 minutes and fill out one line for each individual heard. Record the code for the highest ranked detection type you observed in each one-minute time interval: 1. W (Wing-boom), 2. C (Call), 3. V (Visual), 4. N (Not detected). Only record distance and direction for EWPW and repeat wing-booming CONI.

Point Count #	Species	Time Interval						Distance (circle)	Cardinal Direction	Comments
		1	2	3	4	5	6			
1 Example	CONI	N	W	N	N	N	N	< 100 m > 100 m		
1 Example	EWPW	N	N	C	N	V	N	< 100 m > 100 m	E	Could not accurately count number of individuals

4. POINT COUNT STATIONS: This section of the datasheet should **only be filled out if you select an undesignated or off-road point count station or if you moved >50 m from a designated point count station to conduct your survey.** All designated point count stations will already have coordinates for them, so it is not necessary to include those coordinates here.
